Detlef,

The attached papers contain the basic methods for PFAS in blood that could be easily adapted to look for GenX and other PFECAs.

Please let me know if you need more information on this.

I'll be sending your documents to our supervisors for their read on whether EPA can be involved with this. I'm guessing we can, but it's best to get this hammered out beforehand.

Thank you very much,

Andy

Guys,

See attached (prospectus is the file that starts with R21, outline is the file that starts with GenX). The prospectus is good for sharing for internal approval. If you have methods for PFASs in blood and urine written up, please send.

Thank you,

Detlef
